

## PRESS RELEASE

### *KYNTRONICS IS NAMED A ROCKWELL AUTOMATION TECHNOLOGY PARTNER*

SOLON, OH — June 15, 2021 – Kyntronics, a leading manufacturer of precision actuation solutions is excited to announce that it has joined the Rockwell Automation Technology Partner program. The program references the integration of Kyntronics [SMART Electro-Hydraulic Actuators](#) (SHA) with Rockwell Automation servo motors, drives and controls.

Kyntronics and Rockwell Automation collaborated to develop an Add-On-Instruction (AOI) that is simple to integrate into the ControlLogix platform. The AOI features include position & force control, position control with force & speed limiting, compound moves, multiple gain sets, synchronized motion and coordinated motion using Kyntronics actuators. It is a complete solution that shortens application software development time and simplifies integration for the OEM/Machine Builder.

“Joining the Rockwell Automation Technology Partner program allows us to offer our mutual customers a superior actuation solution that has seamless integration with the Rockwell Automation controls platform” said Carl Richter, Kyntronics VP-GM. “With the collaboration, Kyntronics added a new Controls option allowing the OEM/Machine Builder to provide their own Rockwell Automation components to connect with Kyntronics actuators.”

With an extensive installed base of Kyntronics actuators controlled by Rockwell Automation motors and drives, joining the Rockwell Automation Technology Partner program allows both companies to build on that success, and further increases opportunities to replace hydraulic cylinders and HPU's with the Kyntronics / Rockwell Automation solution.

Additional information on the Kyntronics / Rockwell Automation controls option is available at:

Kyntronics, established in 2013, specializes in actuation systems that offer a superior alternative to hydraulic cylinders and electro-mechanical actuators. Our products address the global trends of energy efficiency, increased automation, more precise control, lower costs and IoT connectivity. Our mission is to offer the best available combination of mechanics, electronics, hydraulics, software and support for actuation solutions.
